

Seed Coat™

Low Rates - High Response

Hopper Box Seed Treatment

DeltAg's system approach to better growth and production includes focus on the SOIL, SEED and PLANT. DeltAg Seed Coat is designed to place focus on the performance of your SEED.

GUARANTEED ANALYSIS

0-0-0

Combined Sulfur (S)	2.000%
Soluble Manganese (Mn)	2.000%
Soluble Zinc (Zn)	2.000%

Derived from Manganese Sulfate and Zinc Sulfate.
Net Weight: 12.5 lb (US) at 68° F (5670 g at 20° C)

GENERAL INFORMATION:

DeltAg Seed Coat is a formulation of DeltAg proprietary chemistry and complexed nutrients, and it is specifically designed to enhance seedling emergence and plant growth.

APPLICATION RATE:

General: A two to four ounce per acre rate is ample for most small seed varieties. The rate used should adequately coat the seed without build-up in the hopper box.

Cotton, Corn, Milo, Soybeans: 2 ounces per acre.

Small Grains (wheat/rice): 4 ounces per acre.

Vegetables: Typical rate is 1 to 2 ounces per acre.

Food Plots & Small Gardens: Apply at a rate of 4 ounces per 50 lb of seed.

APPLICATION DIRECTIONS:

When: The day of planting!

How: Sprinkle one half rate over the seed in the bag.

Stir or shake the seed until dispersed.

Pour the seed into the planter.

Sprinkle one half rate over the seed in the planter.

Stir DeltAg Seed Coat in with the seed.

Plant your crop.

CONTAINS NON-PLANT FOOD INGREDIENTS: Amino Acids, Enzymes, Vitamins and DeltAg Proprietary Complexing Agent.

NOTE: DeltAg Seed Coat should not be considered as a replacement for customary hopper box inoculant or pesticidal seed treatments.

SEED COAT™

A Healthy Start

We all know the best crop has to have a healthy, vigorous start, good growth, and be well established before stress hits. DeltAg has a dry, flowable biostimulant formulation designed for hopper box treatment of seed in the field at planting. DeltAg Seed Coat, applied at 2 to 4 ounces per acre, contains the DeltAg "active" chemistry of vitamins, amino acids, enzymes and nutrients. The design is to enhance the microbial activity in the rizosphere surrounding the seed as it is laid in the soil at planting. The healthy activity of microorganisms immediately adjacent to the seed is critical for good root development and emergence. Research has shown DeltAg Seed Coat to enhance emergence by 10% to 20% in row crop agriculture.

Seedling "Lag Phase"

All seed expend energy in an effort to emerge. After emergence, and depending on weather variables, the seedlings tend to slow down or even stop while the root system is developing. Then after several days, the crop begins to grow. We call this the "Lag Phase". With Seed Coat your emerging seedlings will develop healthier roots for improved uptake of nutrients and water much quicker. A more vigorous start lends itself to proper root development and a continued advantage in further crop development. DeltAg Seed Coat applied to seed has shown better emergence, a better survival rate, and quicker growth. All of this is due to a healthier environment surrounding the seed itself.

SEED COAT™

**Chemistry....
Not Fertilizer!**

Early Season Seed & Seedling Problems

With planting time comes excitement and also problems. Uncontrollable weather like rain, cold, flooding and drought can cause problems in early stages of crop development.

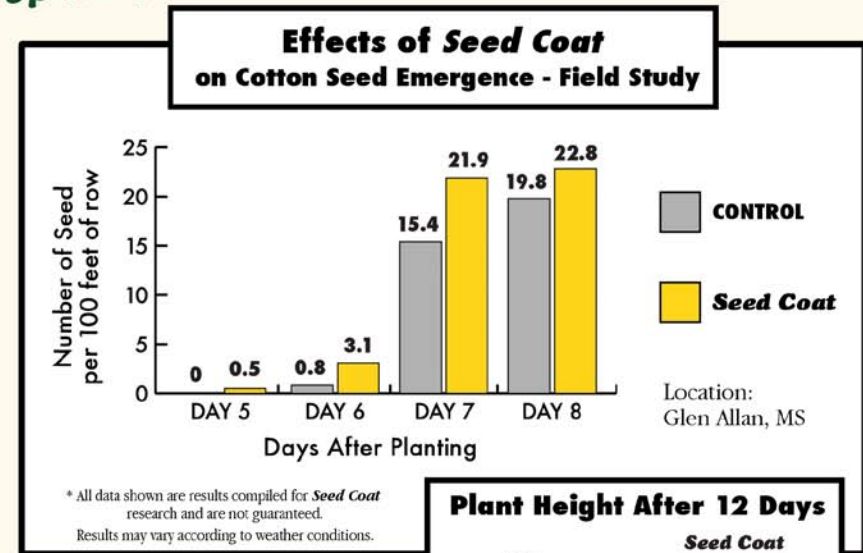

1. Poor Germination
2. Thin Stand
3. Seedling Disease
4. Chemical Damage
5. Slow Growth & Development

With all these problems, your seed needs help to ensure a quick start. Adding **Seed Coat** provides the essential nutrients, vitamins, and amino acids needed to ward off problems. Without a doubt or any argument, anything that can produce this kind of positive effect and is economical should not be overlooked. **Seed Coat** is inexpensive insurance against Ol' Mother Nature for the crucial first 12 days of growth.

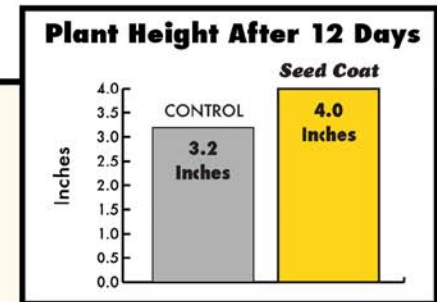

What is **Seed Coat**?

Seed Coat is a dry blend of organically complexed nutrients for hopper box seed application. **Seed Coat** is an extremely fine powder that will coat even the smallest of seed. **Seed Coat** creates a rich environment directly around the seed for a good, healthy start. **Seed Coat** is designed to provide seed with an energy source for early emergence, strong root development and enhanced seedling vigor.

**Low Rate
Crop Response**

Look at the data above and study the results closely. In the crucial early stages, more seed emerged faster. On Day 6, with **Seed Coat** over 3 times as many seed had emerged and by Day 7, nearly 40% more per 10 feet of row. Given the fact that in just 12 days seed treated with **Seed Coat** grew seedlings almost an inch taller than the untreated seed; **Seed Coat** is a valuable asset in seed emergence and growth.
