Landscape Guidelines

Initial Landscaping

Planting Seed or Over-Seeding: Apply *Seed Coat* @ 4 oz (dry weight)/50 pounds of seed.

Designed to stimulate micro-flora in the rhizosphere immediately adjacent to seed, and enhance seedling root development and stand establishment. Get More Seeds Up & Growing!

Transplanting Bedding Plants, Shrubs and Trees: Dilute *Plant Power* @ 2 Oz/gallon of water and use as final water after planting. May be repeated on 7 to 10 day intervals if needed.

Designed to enhance rooting and hasten plant establishment.

Prior to Laying Sod: Broadcast spray *Soil Solution* @ 0.75 Oz/1,000 square feet (32 Oz/acre).

Designed to enhance soil aeration and root proliferation.

Immediately After Laying Sod: Broadcast apply *Plant Power* @ 0.50 Oz/1,000 sq ft (24 Oz/acre).

Designed to maintain healthy roots and growth, and improve response to applied fertilizers.

Hydro-Seeder: Simply add *Plant Power* directly into the Hydro-Seeder tank after water but before any other ingredients, mix well, then add other ingredients. Rate is 0.75 Oz/1,000 sq ft (see brochure)

Landscape Maintenance

Bedding Plants and Shrubs: Spray a fine mist of dilute *Plant Power* over foliage avoiding excess runoff during growing season (minimum of monthly). *Plant Power* may be applied weekly as needed. Dilute *Plant Power* @ 2 Oz/gallon of water in sprayer or apply in boomed spray rig at a rate of 24 Oz/acre.

Designed to maintain healthy roots and growth, and improve response to applied fertilizers.

Foliar for Turf: Broadcast apply *Plant Power* @ 0.50 Oz/1000 sq ft (24 Oz/acre). May also be applied shortly after turf green up or two to three weeks after green up.

Designed to enhance root development, growth, and improve response to applied fertilizers.

NOTE: *Soil Solution* may also be applied on green turf where heavy thatch is an issue.

Turf: Spring-Summer to Early Fall Foliar Application: Apply *Plant Power* @ 0.50 Oz, *Iron Plus* @ 0.25 Oz and *Nutri-K* @ 0.75 Oz/acre broadcast. Repeat monthly or as needed to maintain healthy turf.

Designed to enhance root development, vigor and improve turf tolerance to stress.

Turf: Late Summer, Early Fall Application: Apply *Nutri-K* @ 0.75 Oz, *Plant Power* @ 0.33 Oz and *Iron Plus* @ 0.25 Oz/1,000 sq ft broadcast.

Designed to enhance stolon branching for thickening of turf, and improve tolerance to winter weather.

Trees: Applications may be made year round, but for optimum results, make applications at Bud-Break in late winter/early spring and again prior to fall Leaf-Drop. Depending on tree trunk diameter, cut a notch in the soil with a sharp shovel to a depth of at least 8 inches halfway of the drip line. Dilute *Plant Power* in water @ 2 Oz/gallon and fill each hole. Seedling to 2 inch diameter-one hole, 2 to 4 inch diameter- two holes (one on each side of trunk), over four inch diameter-four holes equal quadrants around tree drip line. This same dilution of *Plant Power* may also be applied on foliage as a fine mist.

Designed to enhance root system and tree development, improving bloom set and mast production.

Mixing: Always dilute *Nutri K* in water first, and follow with other ingredients in listed order to avoid excessive foaming.

These *DeltAg Guidelines* have been utilized to enhance overall plant performance and are not intended to be utilized as a replacement for basic and customary fertilizer applications.
