Dribble Treated Corn
5 Gallons 10-34-0
5 Gallons 32% Nitrogen**

Corn Treatment: Starter Combination was applied at planting by Dribble Application of the total ten Gallon Combination behind the Press Wheel of the Planter. Corn is Pioneer 34B-23, which is a Short-Season Variety for the Mid South. Corn was planted on March 20, 2003, and emerged on March 26, 2003. The purpling, we are told, is typical of short-season corn varieties that are brought South and go through a Cold, wet weather event after fast growth.
